

eReflex electric fires

free your imagination

Undulating flame visuals, dancing seemingly impossibly amongst a deep bed of realistic logs or shining crystals, make the eReflex one of the most captivating electric fires ever created.

But the eReflex doesn't just deliver mesmerising effects and a fireside glow. Designed with the very latest LED technologies and offering a choice of stunning fuel beds, this innovative electric fire range lets you decide on the perfect ambience to suit your mood - with only your imagination to hold you back.

choosing your eReflex

eReflex inset flush-mounted wall fires

eReflex Inset fires are offered in three sizes and are designed to be built into the wall for a minimalist installation that integrates seamlessly with your interior.

eReflex outset multi-sided fire

The eReflex Outset fire allows you to create a bespoke two sided or three sided installation, for a unique focal point that provides a panoramic view of the stunning visuals.

creative control

The eReflex's programmable thermostatic eco handset gives you full control over the fire's host of features. Flames, fuel bed lighting and ambient heating can all be controlled independently to create the desired atmosphere, with or without heat.

Innovative energy saving features let you 'set and forget' your eReflex to turn heating on or off automatically, as well as intelligently manage the heat output to minimise energy use, so you can completely immerse yourself in the visual effects.

flame options

Select Amber, Blue or Amber & Blue flames to suit your mood, with five brightness settings for each colour to give you the perfect ambience.

chromalight fuel bed lighting

Choose from 13 different vibrant colours to illuminate the eReflex's striking fuel bed, which can be fine-tuned with five brightness levels.

Alternatively, you can opt for a gradually changing spectrum as the fuel bed lighting cycles through each colour.

thermostatic ambient heating

Select the optimum room temperature you desire and your eReflex does the rest for you. Choose between 15°C and 25°C degrees, and depending on the ambient temperature the eReflex will reach the desired level as efficiently as possible.

comfort temperature

Comfort Temperature lets you set the thermostat as you would your central heating, with Eco and Boost settings, which offer further freedom to adjust the temperature by +/- 4°C if desired.

heating advance mode

You can manually advance any pre-set heating cycle to either come on or turn off before the programmed time without disrupting daily or weekly scheduling.

adaptive start control

Adaptive Start allows the eReflex to automatically turn on up to 45 minutes in advance of a pre-set time to reach your desired temperature when you want.

daily and weekly heating

Set the eReflex to turn on to provide heat at certain times of the day, or even days of the week, using the handset's Daily and Weekly Timer control functions.

open window detection

A sudden drop of temperature of 4°C or more within five minutes, like that caused by an open window, will automatically turn off the eReflex's heat to save energy. Heating can easily be resumed simply by pressing the heat button, or allowing the room's temperature to rise by closing the window.

inspiring flames & fuel effects

immersive lighting system

eReflex fires use Gazco's Chromalight triple lighting system to create a mesmerising display with almost endless possibilities.

Vivid flame effects are projected to appear amongst the fuel bed for a deep, three-dimensional display and can be set to natural amber, striking blue or even a combination of the two.

Each flame colour is enhanced with matching down-lighting, bathing the fuel bed in your choice of warming amber or cool white, for a truly immersive display.

Powerful Chromalight up-lighting illuminates the fuel effects from below, providing relaxing, mood-enhancing ambience whether set to amber, for an authentic glowing

ember bed, or one of many other atmospheric colour choices. Fuel bed lighting can also transition through each vivid colour for a gradually changing spectrum, providing the ultimate wow factor.

- ❶ Choice of three flame effects
- ❷ Immersive down lighting
- ❸ A selection of 13 vivid fuel bed lighting colours

customisable fuel bed

Every eReflex fire comes with a varied selection of fuel effects that transform the fire's look and feel. The highly realistic log selection offers a traditional wood fire aesthetic, and when positioned on the bed of clear and grey pebbles looks just like a real fire.

Alternatively, the Crystal-Ice effect fuel bed creates an ultra-contemporary look,

particularly when paired with the blue flame setting and the many vibrant Chromalight up-lighting colour options.

Whichever fuel bed you choose, the fire's easily removable glass front lets you quickly mix and match the assortment of effects, for your own bespoke display.

eReflex inset fires

eReflex Inset fires create minimalist, flush-mounted wall installations for a clean and contemporary aesthetic. Offered in a choice of three sizes and proportions, Inset models are suitable for a broad range of settings from the lounge to the bedroom. Each size features the eReflex's powerful Chromalight Immersive LED technology, assortment of feature fuel effects, and advanced Thermostatic handset.
